Organoids to model, diagnose and treat human diseases

Hans Clevers 2021

Single Lgr5 cells form 'mini-guts- in 3D-culture R-spondin1, EGF, Noggin, in Matrigel (Toshiro Sato)

Clevers Lab|Digizyme

- Unimpeded expansion from single human Lgr5 stem cells
- stomach, small intestine, colon, liver, pancreas, prostate, lung, ovary, mammary gland, salivary/tear gland, taste buds, inner ear...
- Organoids model cancer, hereditary- and infectious diseases.

CRISPR/CAS9 readily allows rewriting the DNA code of patient-derived organoids
